Department: B.Tech AIML

THE PROBLEM

Placement workflow

Company requirements → manual eligibility checking → form creation → notifications → tracking → shortlisting → interview scheduling

Key problems

- Eligibility checks and record verification are mostly manual
- Placement coordination is fragmented across forms, emails, tracking, and scheduling
- Last-minute changes create delays and schedule clashes

OUR SOLUTION — PLACIFY

Placify turns placement coordination from a manual, reactive process into an autonomous, agent-driven workflow.

Key benefits

- Understands company requirements automatically
- Verifies eligibility against academic records
- Generates forms, emails, and reminders

Operational impact

- Tracks application and assessment progress continuously
- Detects scheduling conflicts and replans instantly
- Coordinates multiple AI agents to act autonomously

📌 Placify does more than store data — it observes placement state, reasons about next steps, and adapts when conditions change.

HOW THE AGENTS WORK TOGETHER

Sequential agent flow under LangGraph — each step passes state forward, with conflict checks triggering re-planning when needed.

WHO USES PLACIFY?

STUDENTS

Receive targeted opportunities.
Apply through automated forms
and track updates.

PLACEMENT OFFICER / TPO

Create drives, monitor
applications, review exceptions,
and approve shortlists.

HR / RECRUITERS

Receive verified candidate lists,
assessment results, and
organized schedules.

FACULTY / COORDINATORS

View placement activities, spot
conflicts, and support
coordination.

KEY BENEFITS

Less manual coordination, faster setup, reliable verification, and fewer interview conflicts.

 Placify turns campus placement from a manually coordinated process into an intelligent, adaptive and agent-driven workflow.
